

Idea Factory Intensive Program #2

# 딥러닝 홀로서기

**이론강의/PyTorch실습/코드리뷰**

딥러닝(Deep Learning)에 관심이 있는 학생 발굴을 통한  
딥러닝의 이론적 배경 강의 및 오픈소스 딥러닝 라이브러리 PyTorch를 활용한 실습

# #25

# Dealing with Sequential Data

Imagine Your Boss Wants You to Solve a Problem Like...

Automatically generate caption with the given image

Predict whether a company would be bankrupted

Translate one sentence into another language

Classify whether the word is owns' name or not

Imagine Your Boss Wants You to Solve a Problem Like...

Automatically generate caption with the given image

Predict whether a company would be bankrupted

Translate one sentence into another language

Classify whether the word is owns' name or not

Sequential Data!

The diagram consists of four red arrows pointing from the four task sentences on the left towards the text 'Sequential Data!' on the right. The arrows originate from the right side of each sentence and converge towards the text.

Imagine Your Boss Wants You to Solve a Problem Like...

Sequence of words

Automatically generate **caption** with the given image

Predict whether a company would be bankrupted

Translate one sentence into another language

Classify whether the word is owns' name or not

Sequential Data!

```
graph LR; A[Sequence of words] --> D[Sequential Data!]; B[Automatically generate caption with the given image] --> D; C[Predict whether a company would be bankrupted] --> D; E[Translate one sentence into another language] --> D; F[Classify whether the word is owns' name or not] --> D;
```

Imagine Your Boss Wants You to Solve a Problem Like...

Automatically generate **caption** with the given image

**Sequence of balance**

Predict whether a company would be **bankrupted**

Translate one sentence into another language

Classify whether the word is owns' name or not

**Sequential Data!**

graph LR; A[Automatically generate caption with the given image] --> D[Sequential Data!]; B[Sequence of balance] --> D; C[Predict whether a company would be bankrupted] --> D; E[Translate one sentence into another language] --> D; F[Classify whether the word is owns' name or not] --> D;
```

Imagine Your Boss Wants You to Solve a Problem Like...

Automatically generate **caption** with the given image

Predict whether a company would be **bankrupted**

↗ **Sequence of words**

Translate one **sentence** into another language

Classify whether the word is owns' name or not

**Sequential Data!**

The diagram consists of four lines of text on the left and one line of text on the right. Four red arrows originate from the right side of the four lines on the left and point towards the text on the right. The arrows from 'Automatically generate caption' and 'Predict whether a company would be bankrupted' point to the top of the 'Sequential Data!' text. The arrow from 'Translate one sentence' points to the middle of the 'Sequential Data!' text. The arrow from 'Classify whether the word is owns' name or not' points to the bottom of the 'Sequential Data!' text.

Imagine Your Boss Wants You to Solve a Problem Like...

Automatically generate **caption** with the given image

Predict whether a company would be **bankrupted**

Translate one **sentence** into another language

↗ **Sequence of words**

Classify whether the **word** is owns' name or not

**Sequential Data!**

The diagram consists of four lines of text on the left, each with a red arrow pointing towards a central red text label on the right. The arrows originate from the words 'caption', 'bankrupted', 'sentence', and 'word' in the respective lines. The central label is 'Sequential Data!'.

# Classical Approach for Time Series Analysis

# Classical Approach for Time Series Analysis

- Time domain analysis
- Frequency domain analysis
- Nearest neighbors analysis
- Probabilistic Model
- (S)AR(I)MA(X) models
- Decomposition
- Nonlinear Dynamics
- Machine Learning

# Classical Approach for Time Series Analysis

- Time domain analysis → width, step, height of signal
- Frequency domain analysis → Fourier analysis or wavelets
- Nearest neighbors analysis → Dynamic time warping (DTW)
- Probabilistic Model → Language modeling
- (S)AR(I)MA(X) models → Autocorrelation inside of time series
- Decomposition → Time series = trend part + seasonal part + residuals
- Nonlinear Dynamics → Differential Equation (ordinary, partial, stochastic, etc..)
- Machine Learning → Use ML model with hand-made features

# Deep Learning Dealing with Sequential Data

# Deep Learning Dealing with Sequential Data

MLP?

Stack of fully connected layers

CNN?

Stack of (convolution + pooling + fully connected) layers

# Deep Learning Dealing with Sequential Data

MLP?

Stack of fully connected layers

Cannot handle a sequence with arbitrary length

For fixed length sequence, require lots of parameters

CNN?

Stack of (convolution + pooling + fully connected) layers

Actually perform quite well on time series analysis

Recommend to read: <https://machinelearningmastery.com/how-to-develop-convolutional-neural-networks-for-multi-step-time-series-forecasting/>

# Recurrent Neural Network

An unrolled recurrent neural network.

# Recurrent Neural Network with Math

# Recurrent Neural Network with Math

# Recurrent Neural Network with Math

$$h_t = f(Ux_t + Wh_{t-1})$$

$y_{t+2}$

$h_{t+2}$

$V$

Non-linear  
Activation

$W$

$U$

$h_{t+1}$

$x_{t+2}$

# Recurrent Neural Network with Math

$$h_t = f(\textcolor{blue}{U}x_t + \textcolor{red}{W}h_{t-1})$$

$$y_t = f(\textcolor{green}{V}h_t)$$

# Recurrent Neural Network with Math

$$h_t = f(Ux_t + Wh_{t-1})$$
$$y_t = f(Vh_t)$$

$f(x) = \tanh(x)$

$f(x) = x$

Okay, now we understand RNN model(hypothesis)

How can we evaluate it?

# Calculate Loss of Recurrent Neural Network

# Calculate Loss of Recurrent Neural Network

$$Loss(\theta) = \sum_t loss(y_{true,t}, y_{pred,t})$$

# Calculate Loss of Recurrent Neural Network

$$Loss(\theta) = \sum_t loss(y_{true,t}, y_{pred,t})$$

Classification → CrossEntropy

Regression → MSE

# Summary

- There are various tasks which have to deal with sequential data
- Recurrent Neural Network is suitable to handle it
- Basically RNN feeds new input and output from previous step together
- We can utilize RNN differently depends on the task
